Customer Side:

Done by: Jamilush Siam (https://github.com/siamcr7)

Features:

- 1. Followed 3 layered design system.
- 2. Tried to implement MVC by my own with my own features.
- 3. Basic Login and validation.
- 4. Authorization feature: other user or if a user is not logged in then he cannot view any pages by going in to any links.
- 5. Remember me feature: when selected, the user do not need to give the id, password again to log into the system. It was done with cookies.
- 6. After logging the user will see all the foods hovering above in the header section.
- 7. The foods will automatically move in a circle and also there is a right arrow and left arrow so that user can also control. It was done with JavaScript.
- 8. Also if a user places the mouse pointer above a picture of the food, the food rotation will stop and the mouse pointer will change.
- 9. The change in mouse pointer will indicate that the user can click on the image to see the food details.
- 10. In the food details section the user can rate that food.
- 11. Also he will be able to see the updated rating in that page of that food.
- 12. In the dashboard, there is a good afternoon or good morning message depending on the time.
- 13. Also in the dashboard the user will get a notification of how many foods are pending to confirm in his cart.
- 14. User can view, edit his profile.
- 15. User needs to logout.
- 16. In the view menu page, the user can search for foods by name, type, ingredients, price and rating.
- 17. He can also click on the image here to view the full details of the food.
- 18. He can add to the cart as much quantity as he like.
- 19. He will see real time what he has added to the cart till now in this adding session.
- 20. Also he will be able to see the total number of items added to the cart in real time.
- 21. User can view the cart.
- 22. Here also, he will be able to change the quantity of the foods added in the cart.
- 23. In real time he will be able to see the change of total price when he changes the quantity of the foods.
- 24. User will be able to confirm the order, this will effectively place the food as ordered and the employee will get a notification.
- 25. User can view his whole order history.
